**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 2, 7, 8, 12, 18 and 20 are rejected under 35 U.S.C. 102(e) as being anticipated by Ng et al. (U. S. PAT. 6,529,041).

In claims 1 and 2, Ng et al. teaches all claimed features in Figs. 1-4, a programmable logic device, comprising an active logic section (100) and a configuration memory (220-1), wherein the active logic section (100) and the configuration memory (220-1) have separate power supply connections (as shown in Fig. 1); and wherein the active logic section comprises a gate array (142 in Fig. 1).

In claims 7 and 8, Ng et al. teaches all claimed features in Figs. 1-4, a programmable logic device integrated circuit, having a plurality of pins (212-OUT1, 212-OUT2, VCC, ground not shown) for connection to respective other devices (220-1, 220-2), the programmable logic device integrated circuit (200) comprising an active logic section (100) and a configuration memory (220-1), wherein the active logic section is connected to at least a first pair of said pins (VCC and ground) to receive power therefrom, and the configuration memory is connected to a second pair of said pins

Art Unit: 2819

(212-OUT1 and ground not shown) different from the first to receive power therefrom; and wherein the active logic section comprises a gate array (142 in Fig. 1).

Method claim 12 corresponds to detailed circuitry already discussed similarly with regard to claim 1.

Claims 18 and 20 correspond to detailed circuitry already discussed similarly with regard to claims 1 and 2.

3. Claims 3-6, 9-11, 13-17, 19 and 21-25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
